Vol. 2, No. 6: 6/6 December 1973

1973 INDEX

Planning for Higher Education is concerned with the academic, financial, physical and community aspects of planning, technical support systems, and the interrelationships between these elements. It is distributed every second month by the Society for College and University Planning to its membership and by Educational Facilities Laboratories to college and university planners, administrators, trustees, and others at national, state, and regional levels who are concerned with planning. The following is a cross-referenced index of the 25 articles published in Volume Two during 1973, followed by a list of contributing authors. The article numbering system, adopted to aid librarians and others interested in filing and retrieving articles, assigns each article its own number and also indicates the total number of articles in each issue. To illustrate, "Vol. 2, No. 3:1/5" translates as "volume two, number three, first of five articles."
